

BETTER ENGINEERED POLY DRUMS

ENVIRONMENTAL SOLUTIONS TECHNOLOGIES PRODUCTS EXPERTISE

A DRUM THAT'S AS GOOD AS IT LOOKS

Compare this with what you're using now!

All Open Head Poly Drums are not created equal.

LEVER LOCK RINGS: 12 Gauge steel (powder coated) with a heavy closure mechanism for easier and safer closure. A 10 inch lever with dovetailed end for superior grip. Safer: No sharp edges to damage hands or lids.

The design of our steel lever lock rings ensure a tighter seal to the drum in drop and impact tests. Our U-channel ring design has a smaller diameter at the underside than at the top to grip the lid as tight as possible to the drum, ensuring a very secure seal.

A tighter fit makes for a higher UN Rating.

LIDS: Heavy Duty Wall Thickness makes for less deflection on UN/DOT Certification. Skirt of the lid is gusseted to reduce flexing. Adds superior structural integrity.

GASKET ON LID: Our special memory sealing gasket is highly pliable, retains shape and can also pass the 3 psi pressure test in higher rated salvage drums.

DRUM: Engineered to the same tough standards as our lids and rings for a complete and secure package.

- Blow Molded HDPE construction
- UN Protection Package
- Chemical and Weather Resistant
- UN Certified to HM-181
- Approved for use with packing groups I,II and III
- UL 94HB Flammability Rating
- Tapered and Nestable for Ideal Storage
- Food Grade Quality
- Stack Tested
